ABSTRACTED-PUB-NO: JP 09069953A

BASIC-ABSTRACT:

The terminal has a receiver (51) that receives the telephone number of a communication partner. A collation unit (57) checks if the received telephone number is similar to the telephone number registered in a one-touch dial plate.

A notification unit (58) notifies and permits coloured image reception based on the processing results of the collation unit. A distinction unit (59) determines the communication partners that may and may not receive the coloured image.

ADVANTAGE - Prevents coloured image reception to communication partner that should not receive coloured image. Prevents useless utilisation of ink in receiving unnecessary coloured image. Eliminates inconvenience of wasteful communication for long time.
